

ADTA 5240 Project analysis and visualization

For this project we are considering BEA's economic report on balance of Payments. In this analysis we are presenting trends in flow of money in and out United states in terms of exports, imports, investments and debt payments.

This analysis is targeted at general public to educate them on the combined sectors of United states economy, trends in world markets and investment trends in US markets.

- Export increase growth in percentage

- US investments in foreign markets
- From 2022 to 2023, we saw some interesting financial trends. Debt instruments grew significantly, showing that businesses are leaning more on borrowing. On the flip side, fresh equity investments dropped, hinting that investors are being cautious. U.S. acquisitions abroad increased, showing confidence in foreign markets despite global uncertainties.
- Looking at sectors, finance and holding companies performed well, likely due to strategic consolidations and evolving financial strategies. Manufacturing was more unpredictable, possibly due to supply chain issues and rising costs.
- These trends are important because they highlight where growth is happening and where challenges lie. Understanding this helps businesses, policymakers, and investors focus their efforts on areas with the most potential for success and tackle any hurdles effectively.
